EDUCATION

University of Washington, Seattle

Expected Graduation: June 2027

Major: Computer Science Minor: Business Administration

SKILLS

Languages: Python, Java, C++, C#, JavaScript, HTML, CSS, SQL, Go, TypeScript, R, x86 Assembly, Dart, PHP, Hack

Tools + Technologies: Flask, Express.js, React, Flutter, AWS (EC2), Azure DevOps, Databricks, Azure SQL, Git, Linux (Ubuntu), Apache, PyTorch, TensorFlow, OAuth, REST APIs, Tableau, Jira, Confluence, Visual Studio, Docker, NumPy, PostgreSQL, MySQL

Certifications:

- AI/ML: IBM AI - Generative AI & chatbots (Python, Flask); AI Engineering Workshop - OpenAI fine-tuning, genetic workflows
- Web Dev & Data: Duke Programming Foundations, Girls Who Code Immersion Program, Foster School of Business (Excel, R)

RELEVANT COURSEWORK

Data Structures and Parallelism, Machine Learning, Computer Security, Software Design and Implementation, Data Management, The Hardware/Software Interface, Foundations of Computing II, Algorithms, Systems Programming

EXPERIENCE

Computer Security CSE 484, Paul G. Allen School | Teaching Assistant

September 2025 - Present, Seattle WA

- Teach weekly 50-minute sessions, labs, and office hours on binary exploitation, memory corruption, web vulnerabilities, cryptography, buffer overflows, format strings, and heap exploits, guiding students in debugging (GDB, stack/heap)

Human-Centered Robotics Lab, University of Washington | Undergraduate Researcher

August 2025 - Present, Seattle WA

- Conduct research on shared autonomy with the Stretch assistive robot, programming in ROS/rviz/web interfaces to design and test natural human-robot interaction methods such as language-based corrections and confidence-driven assistance

Perplexity AI | Campus Partner

August 2025 - Present, Seattle WA

- Spearheaded the launch of Perplexity's AI-powered Comet browser on campus by shaping adoption plans, organizing training sessions, and synthesizing user feedback, driving a 25% adoption increase through onboarding and cross-team alignment

Uber | Software Engineering Intern

June - September 2025, Seattle WA

- Led migration of driver rewards functionality into the Loyalty service and optimized Upside discount integration, establishing clear service ownership, improving service boundaries, and reducing cross-team dependencies
- Designed and implemented backend workflows for driver discounts, integrating Upside APIs and internal services to handle eligibility, location validation, payment linking, and discount redemption in production; authored 50+ production commits

Quadrant Technologies (Microsoft Vendor) | Software Engineering Intern

July - September 2024, Redmond WA

- Led front-end development for Vamsa, a production web and iOS app using React Native, implementing CI/CD pipelines with Azure DevOps and collaborating cross-functionally to reduce delivery timelines by 25%; presented to 100+ stakeholders

MightyCoders | Mentor

August 2021 - March 2024, Bothell WA

- Taught Java (Eclipse) and Python to 150+ students ages 7-14; trained mentors in debugging and core programming concepts

PROJECTS

github.com/srishtisingh48

Neural Networks & Kernel Methods from Scratch

- Built neural networks and optimization algorithms from scratch, implementing forward/backpropagation, SGD optimization, MSE/Cross-Entropy, Lasso (ISTA), and logistic regression without torch.nn, enabling fine-grained control over model training
- Trained and evaluated models on MNIST and synthetic datasets, comparing architectures and visualizing convergence
- Implemented kernel regression with bootstrap resampling to estimate prediction uncertainty and analyze model stability

INRIX + AWS Hackathon

- Built an AI-powered system in 24 hours using a neural network model and the SegmentSpeed Inrix API to predict road congestion based on traffic features, earning an Honorary Mention among 300+ participants

CSEED: Music Match

- Built a web application that matches individuals based on music taste, deployed via AWS EC2 with Linux, Apache
- Integrated Spotify APIs with OAuth for secure authentication, handled user listening data, and presented the app to 350+ students over four months to highlight relationships between music preferences and personality

Emotion Detector

- Built and deployed the application in 6 weeks using Watson NLP and Flask to analyze text feedback into 6 distinct emotions
- Integrated prompt engineering, error handling, and static code analysis, improving code efficiency by 40%

EXTRACURRICULARS

COM Squared Officer

- Organize career panels and tech talks for COM², the largest undergraduate RSO in the Allen School (2,000+ students), and host and edit COM-versations, a podcast featuring CS faculty interviews on their research, teaching, and industry experience

Phi Chi Theta: Vice President + Tech Committee

- Oversee a selective 70-member business organization focused on leadership, mentorship, and networking; founded and lead the Tech Committee, built a searchable alumni database, and engaged 50+ tech alumni to support data-driven initiatives
